Appl. No. 10/662,923

Amdt. dated November 3, 2005

Reply to Office Action Mailed August 3, 2005

The following listing of claims will replace all prior versions, and listings, of claims in the

application:

Listing of Claims:

Claim 1 (Canceled).

Claim 2 (Currently amended): An apparatus for separating layers of tissue comprising:

a first tubular member having an open proximal end and an open distal end defining a

first bore therethrough;

a first inflatable member disposed on the distal end of the first tubular member, the first

inflatable member having an uninflated state and an inflated state wherein the first inflatable

member has an open proximal end and an open distal end defining a first aperture therethrough,

the first aperture and the first bore being configured and dimensioned for slidably receiving a

surgical instrument therethrough;

a second tubular member having an open proximal end and an open distal end defining a

second bore therethrough, the second tubular member being configured and dimensioned for

slidably receiving the first tubular member and the first inflatable member in the uninflated state;

and

a second inflatable member disposed on the distal end of the second tubular member, the

second inflatable member having an uninflated state and an inflated state, wherein the first and

second inflatable members are longitudinally spaced apart to define a working space

therebetween, and when the first and second members are in the inflated state, movement of the

first inflatable member towards the second inflatable member is capable of capturing body tissue

therebetween.

Claim 3 (Original): The apparatus of claim 2, wherein the first tubular member further

comprises a first inner member disposed with the first tubular member and defining an annular

space therebetween, the annular space in fluid communication with the first inflatable member.

Claim 4 (Original): The apparatus of claim 3, wherein the second tubular member further

comprises a second inner member disposed within the second tubular member and defining an

annular space therebetween, the annular space in fluid communication with the second inflatable

member.

Claim 5 (Previously presented): The apparatus of claim 2, wherein the first inflatable member

has a substantially toroidal configuration.

Claim 6 (Canceled).

Claim 7 (Previously presented): The apparatus of claim 5, wherein the second inflatable member

has a substantially toroidal configuration, the second inflatable member having an open proximal

end and an open distal end defining a second aperture therethrough.

3

Appl. No. 10/662,923

Amdt. dated November 3, 2005

Reply to Office Action Mailed August 3, 2005

Claim 8 (Currently amended): The apparatus of claim 7, wherein the second aperture is

dimensioned for slidably receiving the first tubular member.

Claim 9 (Currently amended): The apparatus of claim 7, wherein the second aperture is

dimensioned for slidably receiving the first tubular member and a surgical instrument.

Claim 10 (Canceled).

Claim 11 (Previously presented): The apparatus of claim 2, wherein the surgical instrument is an

endoscope.

Claim 12 (Previously presented): The apparatus of claim 2, wherein the surgical instrument is a

laparoscopic instrument.

Claim 13 (Previously presented): The apparatus of claim 2, wherein movement of the first

tubular member towards the second tubular member being capable of separating a first layer of

body tissue from a second layer of body tissue when the first and second inflatable members are

in the inflated state.
